

# Art in Motion

## Color the Bird:

Color both the body and the wings of the bird. Be sure to color both sides of the paper for a vibrant, realistic look.

## Cut Out the Shape:

Carefully cut out the shape of the bird's body and wings.

## Prepare the Wings:

Make a slit in the body where the wings will go. Insert the wings through the slit to attach them to the body.

*Optional: Fold the wings in half to create a dihedral angle. This will make your bird's flight more stable.*

## Add Weight for Balance:

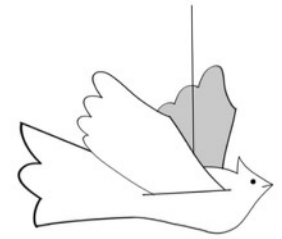

You can place a paper clip on the bird's bill (beak) to help with balance and flight.

## Adjust for Flight:

Move the wings back and forth in the slot to find the best balancing point for flight.

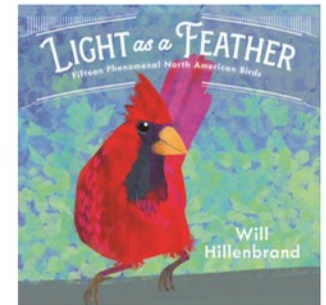

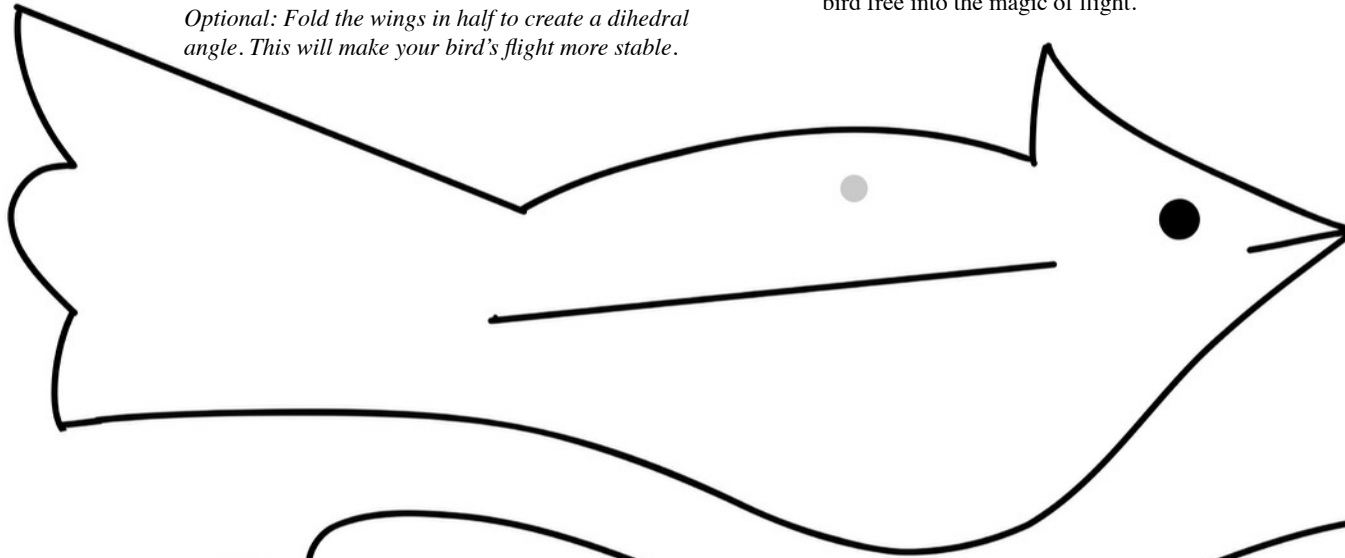

## Test Your Bird:

Give your bird a gentle toss and watch it soar! Enjoy setting your bird free into the magic of flight.

**Tip:** Use stiff paper to give the wings extra support.

To make a bird display, poke a hole in the bird's body where you see the light gray dot, then put a string through it.
